ALL THE AI NEWS THAT FITS THE LAST 24 HOURS

# ↓: AI Daily

MONDAY, NOVEMBER 9, 2026 EDITION FOR MANOHAR · LAST 24 HOURS WINDOW: NOV 8, 8:15 AM – NOV 9, 8:15 AM CT

TOP STORY

## Nvidia's board opens an inquiry after Jensen Huang admits an affair with an executive US intelligence links to China

In a Sunday staff memo, Nvidia CEO Jensen Huang acknowledged an affair with Alice Huang, an executive at Singapore cloud customer Megaspeed whom US intelligence reportedly believes was recruited by China's MSS. Nvidia's board said it is starting an independent-director inquiry with outside counsel, says it has no evidence company secrets were compromised, and reaffirmed its confidence in Huang.

Three House committee chairs have asked Huang for a closed-door briefing on November 18, the day after Nvidia's Q3 earnings, and Sen. Chris Coons says Congress will investigate. China's Foreign Ministry called the claims unsubstantiated on Monday. Huang and his daughter Madison both skipped Nvidia AI Day Seoul, which opened today.

**WHY IT MATTERS** *Nvidia's push to loosen China chip export controls now has a political wildcard attached. If you plan GPU capacity or pricing around Nvidia supply, watch the Nov 18 briefing and the earnings call for any change in export posture.*

TODAY IN 60 SECONDS

### The short version

- **Nvidia:** board probes Huang's China-linked affair; congressional briefing set for Nov 18.
- **Claude:** Personal Finance beta lets Claude read bank data via Plaid (US, Pro/Max/Ultra).
- **Claude Code:** "Don't ask again" saved plaintext secrets into public repos, Apiiro finds; Anthropic says it is investigating.
- **Compute:** Google adds TPU 8tx and 8i Max; Anthropic reportedly buys ~$3.4B of gas generators.
- **Open weights:** llama-modchip runs a 284B DeepSeek model on a 64GB CPU-only box.
- **Kubernetes:** KubeCon NA opens; GKE dynamic slicing for TPUs goes GA.
- **Voice:** Shizuku-Duplex, a Japanese full-duplex voice model, ships with 80ms inference steps.

## NEW CLAUDE FEATURES

PRODUCT · BETA

### Claude can now read your bank accounts

Anthropic is rolling out a Personal Finance beta to US Pro, Max and Ultra subscribers on web, desktop, iOS and Android. Users link accounts through Plaid; Claude gets read-only access to balances, credit limits and up to 24 months of transactions, and can turn them into charts, calendars and dashboards. It cannot move money.

Anthropic says chats inside the Personal Finance hub are not used for training. Disconnecting a bank stops future reads but does not erase figures already in chats, artifacts or shared links.

**WHY IT MATTERS** *It is a template for consented, connector-based access to sensitive data. If you build voice agents that touch customer accounts, copy the read-only scope, the visible unlink flow and the explicit retention rules.*

SECURITY · CLAUDE CODE

### "Don't ask again" leaked secrets into public GitHub repos

Security firm Apiiro found that choosing "Yes, and don't ask again" in Claude Code can store the exact approved command, secrets included, in plaintext in .claude/settings.local.json. Across public GitHub it counted 1,122 files with a real secret (1,379 distinct secrets), among them database passwords, Supabase keys, SSH logins and AWS keys. Counting older file versions and transcripts, the tally reached 2,539 across 1,994 repos.

Claude Code lead Boris Cherny said on Hacker News that the team is looking at secret scanning and auto-mode checks, though he conceded these may not fully fix it. Apiiro advises rotating any credential the file ever held.

**WHY IT MATTERS** *Audit your repos for that file today, gitignore it, and approve command patterns rather than literal commands. Never type secrets inline in agent-run shell commands.*

COMPUTE · REPORTED

### Anthropic reportedly spends ~$3.4B on gas generators for data centers

The FT reported Sunday (via Reuters) that Anthropic bought commitments for 1.7 GW of heavy-duty gas generators from Texas supplier OnePWR Solutions in late September. It did not acquire OnePWR or its staff, but the deal includes the engineering and construction capability to install them. Reuters could not verify the report and Anthropic did not comment. Note: the Reuters item was posted about an hour before this edition's window opened.

**WHY IT MATTERS** *Power is now a bottleneck Anthropic is buying its way around. Expect capacity, rate limits and pricing to track that build-out.*

REPORTED · SINGLE SOURCE

### Anthropic says Claude wrote about 90% of Claude Code

A BigGo report summarizing Anthropic disclosures says roughly 90% of Claude Code's code is now written by Claude, with a six-layer review system behind it. A separate item says Anthropic reported Claude generated 35,000 designs in allergy-drug research. I could only see summaries of both, so treat details as unconfirmed.

## NEW AI TOOLS

SECURITY · HACKER NEWS

### ChatGPT Desktop reportedly forwards your SSH agent to remote hosts

A Hacker News post flags that ChatGPT Desktop silently enables SSH agent forwarding to hosts it connects to, so a Codex agent running there could authenticate as you, including pushing to private GitHub repos. Commenters link the behavior to openai/codex PR #28131 and criticise the lack of per-signature approval. OpenAI has not responded in the sources I found.

**WHY IT MATTERS** *Same lesson as the Claude Code story: agent convenience features keep leaking credentials. Review what your agent hosts can forward.*

POLICY · ENTERPRISE

### Microsoft starts undisclosed Copilot Chat caps on 2,000+ seat tenants

From Nov 9, Microsoft applies fair-use limits on more Copilot Chat features, including image generation, to unlicensed users in tenants above 2,000 seats, after smaller tenants on Nov 2. The numeric limits are unpublished and admins cannot see or change them.

**WHY IT MATTERS** *Opaque quotas are a reliability risk. Build for graceful degradation when a vendor throttles without telling you the number.*

> *Product Hunt and Show HN searches turned up no standout agent-platform launches dated inside the window.*

## LLM & MODEL UPDATES

BENCHMARKS

### Artificial Analysis ships Decision Index v2

Released Nov 8, v2 raises the weight of private benchmarks from 25% to 45% and rewards calibrated confidence as well as accuracy. Decision-specialist models Drex Max v1.1 and Fastino GLiDE v1.2 tie at 73. On the general LLM side, Claude Haiku 5.5 (Max) leads at 77, with GPT-6 Luna (Max) at 76 at higher cost and latency.

**WHY IT MATTERS** *A cheap small model topping a decision benchmark is a reason to re-test your routing. Vendor-supplied scores are only a starting point.*

META

### Meta swaps in specialized models for Muse and Meta AI

Meta says Muse and Meta AI now run on new specialized models trained using "Muse Wonder", bringing Active Memory and Active Focus to everyone. Meta claims they are 2.4x less likely to forget critical info and 67% better at self-correcting. The Times separately reports a UK Muse launch in coming weeks with retailer purchase partnerships; Muse has passed 11 million users.

**WHY IT MATTERS** *Consumer agents that shop on your behalf are heading to market. Merchant-side agent checkout flows will need to cope.*

RESEARCH

### Editing 1,023 weights lifts Qwen by 29 points on MATH-500

A Shanghai AI Lab, Tongji and Fudan paper studies "weight-space programming", where a reasoning agent edits a model's parameters directly instead of training by gradient. On Qwen3.5 models it reports gains up to 29.45 points on MATH-500, with one 1,023-parameter edit giving that lift. Generalization was uneven, and 6 of 16 trajectories reverted to the original weights when edits could not be validated.

## BIG AI NEWS

CHIPS

### Google adds two TPUs: 8tx and 8i Max

Announced Nov 9, the TPU 8tx pairs the 8t silicon with 5th Gen AMD EPYC hosts for confidential computing and claims up to 2x lower latency than 8t. The 8i Max is a dual-chip package that doubles compute, SRAM and HBM bandwidth over the 8i for long-context inference. Alphabet rose over 2% premarket.

**WHY IT MATTERS** *More inference silicon options for long-context and confidential workloads, and more pricing pressure on GPU-only stacks.*

POLICY

### Trump on 60 Minutes: "I don't mind guardrails" if the US stays ahead of China

In his first post-midterm interview, Trump said AI risks "can be managed," named DOJ as the manager and signalled openness to working with Democrats on safeguards, without naming any. Separately, Sen. Bill Cassidy released a discussion draft of the PATIENT AI Act on Nov 8, creating voluntary FDA premarket review for AI software components and a Medicare payment path for AI clinical services.

FUNDING

### Nominal triples its valuation to $3B on a $240M round

The hardware-testing startup raised $240M led by Lightspeed and Insight, with Lux, Sequoia and Lockheed Martin Ventures joining. The CEO says revenue more than tripled in 2026, with 80+ customers including five of the seven largest defense contractors.

LEGAL & SAFETY

### Meta expands AI age estimation to Instagram globally; Asahi Linux drops MIT license

Meta will use AI cues such as apparent height and bone structure to estimate whether users are teens, as lawsuits mount (Reuters). Separately, Asahi Linux moved all repos from MIT to GPLv2-or-later after bad actors used LLMs to rewrite code lifted from contributors' forks and strip attribution.

**WHY IT MATTERS** *Licensing and age-assurance rules are tightening around AI-generated output and AI-inferred user attributes. Check how your product infers age or reuses open-source code.*

CONSUMER

### Apple reportedly turns Siri into an autonomous agent

Reports citing a weekly newsletter say Apple plans an agent-style Siri that manages ongoing tasks and remembers goals, and CEO John Ternus has told staff to speed up AI work. It could ship as early as next year. These are reports; Apple has not confirmed.

## GITHUB & X

| PROJECT | WHAT IT DOES | SIGNAL |
|---|---|---|
| **synchopate/llama-modchip** | Apache 2.0 runtime that fits DeepSeek V4-Flash (284B) into 64GB RAM with custom 1.71 bits-per-weight quantization and a speculative drafter. Reported 9.1-14.7 tok/s generation at 256K context on Zen 5, Apple Silicon and ARM64. | 417 points on Hacker News. Star count not verified. |
| **Claude Code hooks vs CLAUDE.md** | Addy Osmani's X article, echoed against Anthropic's best-practices guide: prompt and CLAUDE.md rules are requests the model may decline; hooks, deny rules and managed settings are enforced every time. | Widely shared on X on Nov 8 (secondary coverage). |
| **Shizuku-Duplex** | See Voice corner. The announcement tweet reached about 3.2K likes. | X, Nov 8 |

**WHY IT MATTERS** *GPU-less inference of frontier-size MoE models is getting practical for private or on-prem deployments, although the reported speeds suit batch work more than live voice.*

> *I could not pull a live GitHub Trending feed for the window, so no stars-gained figures are listed.*

## DEVOPS & KUBERNETES

KUBECON NA · SALT LAKE CITY, NOV 9-12

### Broadcom's VM API enters the CNCF Sandbox; new Workloads Conformance WG

Broadcom's VM API project, which treats virtual machines as first-class Kubernetes resources across providers, was accepted into the CNCF Sandbox. Broadcom also co-chairs the new Kubernetes Workloads Conformance Working Group and says it validated 20 new partners for vSphere Kubernetes Service, including Datadog, Dynatrace, Wiz and CrowdStrike.

**WHY IT MATTERS** *Conformance work should make moving AI workloads between clusters less painful.*

GKE · GA

### GKE dynamic slicing for TPUs is generally available

Google says dynamic slicing decouples logical TPU slices from node pools, cutting AI workload startup by up to 5x and recovery by 4.5x. It supports super-slicing (stitching 16-VM TPU cubes into larger slices) and sub-slicing (partitioning a cube for several jobs). It requires pre-provisioned 16-VM node pools and TPU reservation mode.

**WHY IT MATTERS** *Faster recovery from hardware faults means less lost training and serving time on TPUs.*

RELEASES

### Release pipeline: v1.36 is stable, v1.38 alphas are flowing

Kubernetes v1.36 ("Haru", April) remains the latest stable minor in what I found, and a late-October newsletter listed v1.38.0-alpha.3. I found no new stable release inside the window.

## VOICE AI CORNER

MODELS

### Shizuku-Duplex: a Japanese full-duplex voice model

Shizuku AI released a full-duplex model that listens while it speaks, runs inference every 80 ms, and can nod along, interject and reply before the user finishes. It speaks a quick holding answer while a web search runs, then gives the detailed result, and it summarizes history every five minutes to stay stable. In the company's tests it ranked second among full-duplex models behind GPT-Live-1.

**WHY IT MATTERS** *Turn-taking is the quality gap in voice agents, and full-duplex plus filler-while-searching is a pattern worth copying.*

INDUSTRY · RISK

### LG Uplus launches a Korean voice AI alliance; EU flags AI voice-clone influence op

LG Uplus formed the K-Voice AI Alliance with Seoul National University, KAIST and Yonsei to build Korean-specialized voice AI. Separately, an internal EU assessment reported by Reuters says Russia's "Operation Overload" used AI-cloned expert voices to exploit October's French riots, drawing 2.8M views on its top 10 posts.

## VIDEO AI GENERATION

> *No new video-model launch from HeyGen, Kling, Seedance, Higgsfield or Canva surfaced inside the window. For reference, Google's Gemini Omni 1.2 Flash (released Nov 5, so outside the window) is still the latest big move: clips up to 15 seconds, 720p at $0.07/second, chat-based editing, and the old 1.1 model ID redirects to 1.2 on December 3. If you call the 1.1 model ID, test on 1.2 before then.*
